

## **CARA MENJALANKAN PROGRAM**

Melakukan testing menggunakan Apache Benchmark

```
ab [option] [http://ip_address/]
```

```
Contoh : ab -n 5000 -c 50 http://192.168.43.100/
```

**Cara install Netdata**

```
sudo apt-get install zlib1g-dev uuid-dev libmnl-dev gcc make  
autoconf autoconf-archive autogen automake pkg-config curl
```

```
sudo apt-get install python python-yaml python-mysqldb python-  
psycopg2 nodejs lm-sensors netcat
```

```
git clone https://github.com/firehol/netdata.git --depth=1 -  
/netdata
```

```
sudo ./netdata-installer.sh
```

**Cara install HAProxy**

```
sudo apt-get install haproxy  
sudo service haproxy start
```
